Description and Key Benefits

The **Adkins Labelling Solution for Nursing and Residential Care Homes** is designed to simplify garment identification within your business thereby making life easier for your staff! The labelling system provides a professional image that is durable and easy to apply.

You will find the system invaluable in labelling residents clothing - No more headaches in the laundry room trying to identify residents clothing when the old label has washed off or the ink fades on the handwritten label and becomes illegible. Using the Adkins Labelling Solution means every garment can be clearly labelled and every label will withstand laundry washing + tumble-dry.

The launderable labels are quick and easy to produce and quick and easy to apply. Once printed, the labels are then heat sealed onto the garment using the Adkins Beta Swift Heat Sealer. As the labels are self-adhesive, it allows the operator to ensure they are placed in the correct position prior to heat sealing. Once heat-sealed, the labels will not come off.

The system is perfect for use in small areas of the laundry room, unlike other solutions that can take up valuable space. The printer and keyboard are designed for stand-alone use; no computer necessary, and the Beta Swift heat sealer is a strong but lightweight machine that is extremely portable.

**As Easy as
1, 2, 3**

Simple 3-Step Operation

1. Type name using keypad
2. Print out label
3. Heat seal onto garment
