Mug element advice

STUDIO MUG

ATTENTION

We are confident that your new **STUDIO VERSA PRESS** will give you many years of good service, however, we would advise that the mug press element should be operated with **VERY LITTLE PRESSURE**.

For sublimation and laser copy transfers the ideal setting is achieved by closing the press so that the element lightly touches the transfer/ mug.

N.B. Excessive pressure does not give better transfer results and could damage the element.

Other benefits of using a light pressure setting are that it is quicker and easier for the operator to insert the mug into the press, as the opening is wider.

N.B. The operator should ensure the mug is inserted centrally to prevent any undue wear of the P.T.F.E. protection film surrounding the element.
